281	You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance from the basket and the player's position. The ball is shot N times, successfully. You are given an array A containing the	13CA082
~	distance of a player from basket for N shots. The index of array represents the position of the player. Score is calculated by multiplying the position with the distance from the basket.	V
3BR23CAS	Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a	BR
5°	contiguous subarray of size K from the given array.	0823BR
2	Note:	
3CA087	* A subarray is a contiguous part of array.	3BR23CA
	* Assume 1 based indexing.	3B/K.
38R)	*The array contains both negative and positive values.	(
28°2	* Assume the player is standing on a cartesian plane.	13CA082
	Input Format	3
5BR23CAS	- input1:An integer value N representing the number of shots made by the player	27
56,	- input2 : An integer K representing the size of subarray	9813BR1
